

```
In [1]: temperatures = [20, 30, 40, 50, 60, 70, 80]
```

```
In [2]: for temperature in temperatures:  
        print(temperature)
```

```
20  
30  
40  
50  
60  
70  
80  
100
```

```
In [3]: for temperature in temperatures:  
        if temperature <30:  
            label="freezing"  
        elif temperature <=50:  
            label = "cold"  
        elif temperature <= 70:  
            label = "mild"  
        elif temperature <= 80:  
            label = "warm"  
        else:  
            label = "hot"  
        print(temperature, label)
```

```
20 freezing  
30 cold  
40 cold  
50 cold  
60 mild  
70 mild  
80 warm  
100 hot
```

<p>My temperature cutoffs are: below 30°F is freezing, 30–50°F is cold, 51–70°F is mild, 71–80°F is warm, and above 80°F is hot.</p>
